PASSAGE HANDRAIL

The passage handrails are designed with non-slip particles, safe, comfortable and highly tough. It can lock the fixed seat, making the handrail more comfortable, more stable and more convenient.

Material: high-quality aluminum alloy inner core

Outer tube: nylon

Type: RL-T1832

Color: white

Material: high-quality aluminum alloy inner core

Outer tube: nylon

The panel is constructed from high-quality antibacterial material, ensuring both safety and environmental friendliness. It undergoes stringent inspection and a rigorous manufacturing process to possess exceptional tensile, bending, compression, and impact resistance properties. Moreover, it incorporates anti-corrosion molecules that offer long-lasting protection against fractures and corrosion caused by external factors. The embossed surface of the handrail is resistant to friction and static electricity, providing a comfortable tactile experience while being easily cleanable.

ANTI-BACTERIAL ANTI-COLLISION HANDRAILS

This anti-collision handrail is suitable for hospitals, schools, nursing homes, hotels and rehabilitation centers and other places, auxiliary personnel easy to walk and protect the wall and other advantages.

The anti-collision handrail is composed of anti-bacterial PVC panel, high-quality aluminum alloy lining, elbow, support frame, etc., which can meet the strong and anti-collision effect of the product.

The design of anti-collision handrail meets the requirements of human mechanics, and it has a comfortable feeling when holding it.

Anti-collision handrail surface PVC panel with high antibacterial material, the surface of the product has anti-slip lines, this product has antibacterial, anti-fouling, not easy to change color, easy to clean.

Anti-collision handrail panel according to antibacterial, flame retardant, cold resistance, etc., the product has passed the inspection of the national authority.

ANTI-BACTERIAL ANTI-COLLISION GUARD PLATES

PVC is made of high polymer, which is fireproof, anti-corrosion, antibacterial and easy to clean. Simple installation, close to the wall, easy maintenance, durable.

A variety of styles, wide and narrow, rich in color.

The inner core is specially designed for high quality aluminum alloy and reasonably fastened.

Surface leather grain, fire and light resistant, easy to clean.

And anti-collision handrails together with the use of overall protection of the wall, anti-collision, anti-impact.

200 ANTI-BACTERIAL GUARD PLATES

High polymer PVC serves as exterior ornament
The product can resist fire,
corrosion and bacteria and is easy to clean.

Health must come first at all times! Anti-bacterial
nylon used has a strong inhibitory and killing
effect on bacteria and microorganisms.

ANTI-BACTERIAL ANTI-COLLISION CORNER PROTECTORS

Anti-collision Angle protection is composed of antibacterial PVC panel, high-quality aluminum alloy lining, plug and so on.

The use of high-quality aluminum ingot extrusion molding, can meet the product strong and anti-collision effect, to ensure the beautiful seamless connection of anti-collision Angle and protect the corner.

The design of anti-collision Angle protection meets the requirements of human mechanics and can prevent people from accidentally hitting the corner.

Anti-collision corner protection surface PVC panel using polymer antibacterial material, the surface of the product has anti-slip lines, this product has antibacterial, anti-fouling, not easy to change color, easy to clean.

Anti-collision corner guard panel is antibacterial, flame retardant, cold resistance, etc., the product has passed the inspection of the national authority.
